COLAISTE FEIRSTE SCHOOL

Beechview Park
Belfast

TIMESCALE

This offsite project began in August and finished for the start of the new school year. The 220m² CTX module additional space was **manufactured and installed within 4 weeks from order**. The strict program ensured the deadline was met on-time for the upcoming school year and before the pupils returned to school.

PROJECT INFORMATION

The Education Authority required additional teaching space for Colaiste Feirste school in Belfast to accommodate 120 students. This 120m² offsite project consisted of 16 CTX Plus line modules, creating 4 temporary classroom accommodation.

A turnkey finish was then prepared, working closely with the EA to ensure a smooth handover for September.

The 16 CTX modules were manufactured offsite with our plug and play system, meaning only a matter of a week for connections on-site. Our team worked successfully to complete the additional teaching space accommodation to avoid disrupting the start of the new school year.

Using our Jack-Pad system, this allowed us to rapidly install the classrooms with no excavation required. This system allowed us to overcome any ground level discrepancies and was set up within two days. All service connections were installed from overhead to allow minimal disruption to the live school.

OFFSITE SOLUTION

[CLICK HERE FOR A TESTIMONIAL](#)

P McVey Building Systems was appointed the main contractor by the EA for this project working alongside the Department of Education, to provide an offsite solution. The new accommodation would provide a safe working environment for all the students attending the Colaiste Feirste school.
